

Ethical AI Study Book

Detailed, easy, illustrated • HCT Foundations of Generative AI

made by khalifa

Week 1 Lesson 2 through Week 4 Lesson 8 • 3 MCQs after each lesson

Hello. Please do not rush. This book is written like a kind friend sitting next to you. First we talk in normal sentences. Then we show a small picture or table. Then you try three easy questions. The green box under the questions holds the answers.

You do not need to memorise long words. If you can tell the story of each lesson to a classmate, you already understand it.

Chapter	Lesson	You will be able to
1	W1 L2	Say what GenAI can do, name limits, use a human check.
2	W2 L3	Use AI to learn. Tell good school use from not-good use.
3	W2 L4	Put AI in the right department. Judge useful / clear / responsible.
4	W3 L5	Name use cases for Finance, HR, Marketing, Operations.
5	W3 L6	Find the real problem. Compare. Choose. Explain.
6	W4 L7	Sort risk low / medium / high. Reduce risk.
7	W4 L8	Safe vs unsafe ChatGPT. Responsible checklist.

ONE SENTENCE FOR THE WHOLE COURSE

AI is a fast intern. You are the supervisor. If you would not say it to a teacher, a customer, or a manager, do not let AI say it.

CHAPTER 1 • WEEK 1 LESSON 2

What Generative AI can do

Jobs • limits • human check before you use an answer

Let us start slowly. Generative AI is a computer that can make new words from your words. You type a question. It types an answer that looks new. That is all. It is not magic, and it is not a manager.

The easiest picture is this: AI is a fast intern. The intern has read a huge pile of text. The intern has never stood in your cafe in University City. The intern has never tasted your karak. The intern cannot see whether there is one cashier or five. So the intern can draft. You still have to look.

You ask

>

AI drafts

>

YOU check

>

Then use

What it can do for business tasks

Use it when you need a first version, not a final stamp. It is strong at starting. It is weak at knowing your real shop.

Job	Picture	Example you can try
Draft writing	Rough letter, not the stamp	Invite staff to a Thursday briefing
Brainstorm	Sticky notes on a wall	12 names for a student meal deal
Summarise	Long chat → 5 bullets	Complaints with names taken out
Change tone	Same news, kinder voice	A stock reminder that is not angry
Make a list	Shopping list	Open shop: lights, pot, card machine
Role-play	Rehearsal before a play	You act as a guest. I practise the reply.
Explain numbers	Teacher pointing at a table	Which 2 days sold the least?
Translate a draft	Two columns EN / AR	A person who knows Arabic must still check

AI CAN

- Write a first draft fast
- Give many options
- Turn notes into a list
- Help you practise a talk

AI CANNOT

- Visit University City
- Taste the karak
- See today's queue
- Take the blame for you

Main limits and risks

A limit is a thing AI is not good at, even on a good day. A risk is the trouble you get if you trust the answer anyway. Example: the limit is "it cannot see the queue." The risk is "you print 'fast service' on a poster, and guests wait twenty minutes."

Please remember: AI often sounds sure. Smooth English is not the same as truth. If a sentence would surprise your lecturer or your manager, stop and check.

Name	Easy meaning	Story
Invented fact	It makes up a neat sentence	"Sharjah law says cafes close at 10." Made up.
No live eyes	It cannot see your shop today	It writes "service is always fast" with 1 cashier.
Old news	It may not know this week	A Ramadan offer written in September.

Name	Easy meaning	Story
Private data	What you paste may leave your control	A class phone list "to make it personal."
Copycat	It can echo a famous brand	A slogan that sounds like a big chain.
Too sure	Smooth English hides a wrong step	A refund the owner never approved.

The simple human check – 6 yes/no gates

Before you use any AI answer, walk through six small doors. Each door is a yes/no question. If one door says no, do not post, print, or submit yet. Edit the draft, or throw it away and start again. This is the whole lesson in one habit.

#	Ask	If no
1	Is this the real job I asked for?	Prompt again.
2	Can I see this with my eyes or a real source?	Delete invented awards, prices, laws.
3	Are names, IDs and phones out?	Start a clean chat.
4	Would I say this to a guest's face?	Use truer, kinder words.
5	Is a human still deciding?	Do not auto-post.
6	Can I explain this if a teacher asks?	Learn it, or do not submit it.

WORKED EXAMPLE

AI caption: "Voted #1 in Sharjah! Show your Emirates ID for free dessert. Ends in 11 minutes." Fails gates 2, 3, 4, 6. New caption: "University City study corner. Karak AED 8. Quiet tables after 6pm." A person posts it.

3 easy questions – Lesson 2

Try first. Answers are in the green box under the three questions.

1. What is Generative AI best compared to?

- A) A manager who is always right
- B) A fast intern who drafts, but you must check
- C) A camera that sees your shop
- D) A lawyer for the company

2. Which is a limit of AI answers?

- A) It always visits the real location
- B) It can invent a fact that sounds true
- C) It never makes grammar mistakes
- D) It takes legal blame for you

3. AI writes "Official #1 cafe – send your Emirates ID." What should you do?

- A) Post it because the English is nice
- B) Ask customers for IDs at the door
- C) Rewrite with true facts only and keep IDs out
- D) Add more fake urgency

ANSWERS

1) B 2) B 3) C – 1) It drafts. You stay in charge. | 2) Invented facts (hallucinations) are a main limit. | 3) Human check fails on truth and privacy.

CHAPTER 2 • WEEK 2 LESSON 3

AI that helps you learn

Support learning • good vs not-good • clear prompt • review questions

In this lesson, AI sits on the other side of the desk like a tutor. A tutor may explain, quiz you, and point at unclear sentences. A tutor does not sit the exam in your name. If you cannot say the answer with the chat closed, you did not learn it yet.

Good school use helps your brain. Not-good school use replaces your brain. Teachers can usually hear the difference, because not-good work sounds smooth but empty when they ask "can you explain this?"

Common ways AI can support learning

Notice the pattern in every good example: AI starts, you finish. You still speak, write, or choose.

Support	What you type	What you still do
Explain simpler	"SWOT like week 1. Use a lemonade stand."	Say it aloud with the chat closed
Quiz me	"5 POLC questions. Wait for my answer."	Answer without peeking
Study plan	"4 days. Only planning + controlling."	Follow the plan
Check MY draft	"Mark unclear sentences. Do not rewrite all."	Fix the sentences yourself
More examples	"3 UAE examples of a flat structure."	Write one into your notes
Step by step	"4 controlling steps using a college event."	Match it to the lecture slide

GOOD SCHOOL USE

- Explain a slide I already opened
- Give practice, then I try
- Find holes in MY paragraph
- Make a revision timetable

NOT-GOOD SCHOOL USE

- Do the whole assignment for me
- Sit the quiz in my name
- I cannot explain the answer
- I hide that AI helped

A clear learning prompt has five pieces

A weak prompt is like shouting "help" in a mall. A clear prompt is like briefing a tutor: who they are, what topic, what level, how the answer should look, and what they must not do. You can copy the shape below for any HCT topic.

Role

Topic

Level

Format

Rule

COPY-ME PROMPT

Act as a kind HCT tutor. Topic: four types of planning. Level: first year. Format: a tiny table with one UAE example each. Rule: do not write my assignment. Then ask me 1 question.

After every study answer, pause and ask five kind questions: Does this match the lecture? Can I say it aloud? Did AI invent a name, date, or rule? Did I paste anyone's private details? Would I tell my teacher that AI helped? If you cannot say yes, keep working.

3 easy questions — Lesson 3

Try first. Answers are in the green box under the three questions.

1. Which is a good way to use AI for learning?

- Submit the chatbot's essay as your own
- Ask it to sit the quiz for you
- Ask it to quiz you, then answer yourself

D) Paste a classmate's file and call it yours

2. Which prompt is the clearest?

- A) "Help."
- B) "Write everything about business."
- C) "Act as a tutor. Explain POLC for first year. 4 bullets. Then ask me 1 question."
- D) "Do my homework."

3. You used AI to explain SWOT. What is the best next human check?

- A) Post it on Instagram
- B) Close the chat and explain SWOT to a friend
- C) Delete the lecture slides
- D) Ask AI to sit the test

ANSWERS

1) C 2) C 3) B — 1) AI coaches. You still do the thinking. | 2) Role + topic + level + format + next step. | 3) If you can teach it, you learned it.

CHAPTER 3 • WEEK 2 LESSON 4

AI across business areas

Match the room • workplace prompt • useful / clear / responsible

Imagine the company as a small building. Marketing has a room. Finance has a room. HR has a room. Operations has a room. AI is a tool you carry from room to room. The job must match the room. A caption belongs in Marketing. A payment does not.

If you let the tool wander, two mistakes happen. First, the draft talks about the wrong work. Second, someone treats a pretty paragraph as a real decision. That is how a cafe posts "we are #1" or promises a refund nobody approved.

Department	Helpful AI task	Not AI's job alone
Marketing	Draft 5 National Day captions	Post "officially #1 in Sharjah"
Finance	Explain YOUR monthly totals in simple words	Approve a payment or hide a loss
HR	Draft a polite interview invitation	Reject people with no human look
Operations	Turn delay notes into an opening checklist	Change a safety rule alone
Customer service	Suggest 3 kind replies to "Where is my order?"	Promise a refund nobody approved
Sales	List features from YOUR brochure	Invent a discount
IT	List backup steps	Paste customer passwords into ChatGPT

WORKPLACE PROMPT

You help a cafe supervisor in Sharjah. Draft a 1-day Thursday checklist: open, peak, close. Short sentences. Do not invent visa or health laws. I will edit before I print.

Judge the output with three lights

After the draft arrives, do not ask "is the English nice?" Ask three quieter questions. Useful means you can act on it today. Clear means the right department would understand it. Responsible means it does not lie, leak private data, or pretend AI is the boss.

Light	Pass	Fail
Useful?	I can use it today with small edits	Pretty words, no real steps
Clear?	Right department, short sentences	Mixes HR with finance
Responsible?	No fake prize, no phone numbers	"Post this now" + a customer name

3 easy questions — Lesson 4

Try first. Answers are in the green box under the three questions.

1. "Draft 5 National Day captions" belongs to which area?

- A) Finance
- B) HR
- C) Marketing
- D) IT

2. "Explain this month's expense table in simple words" belongs to which area?

- A) Marketing
- B) Finance
- C) Sales
- D) Operations

3. A draft says "We are the official #1 cafe in Sharjah." Is it responsible?

- A) Yes, because it sounds strong
- B) Yes, if the English is perfect
- C) No — it is an unproven claim
- D) Only if you add emojis

ANSWERS

1) C 2) B 3) C — 1) Captions are a marketing draft. | 2) Money tables sit in Finance. | 3) "#1 / official" needs real proof.

CHAPTER 4 • WEEK 3 LESSON 5

AI use cases for the 4 functions

Name • match a problem • keep it practical

You already know the four business functions from management class: Finance, HR, Marketing, and Operations. This lesson only adds one idea: AI can sit inside each function as a helper. It does not become a fifth function. It does not replace the manager of that function.

A good use case is small and honest. "Summarise this week's totals" is good. "Tell me next year's exact profit" is not. The first uses numbers you already have. The second asks AI to see the future.

Function	Practical AI use	Problem it can support
Finance	Summarise weekly totals with no names	Owner cannot see which week lost money
HR	Draft day-1 checklist for a new cashier	New staff forget the steps
Marketing	10 honest captions for a student combo	The page sounds the same every day
Operations	Put the morning setup in time order	Opening is slow and guests wait

Match a headache to a sensible AI job

Start with the pain, not with the app. If milk runs out every Thursday, the pain is stock. A count sheet helps. A poem about milk does not. If the cafe is noisy after 6pm, ask for quiet-hour ideas the team can discuss. Do not invent five-star reviews that call the place silent.

Headache	Good AI job	Silly AI job
Noisy after 6pm	6 quiet-hour ideas for the team	Fake reviews that say "so silent"
Milk gone every Thursday	A count-and-reorder sheet	Guess next year's exact profit
Need EN + Arabic menu line	Draft both, then a person checks Arabic	Copy Cafe X and change two words
40 CVs on the desk	A first-sort checklist (food-safety card)	Pick winners from names and photos only

PRACTICAL = FOUR YES

Can we try it this week? Do we already have the data? Does it stay private? Does a human still decide? Four yes = practical.

3 easy questions — Lesson 5

Try first. Answers are in the green box under the three questions.

1. Which is a practical Operations use case?

- A) Let AI fire the slowest worker
- B) Put the morning setup in time order
- C) Invent next year's profit to the files
- D) Post fake reviews

2. Milk runs out every Thursday. Best AI-supported task?

- A) Guess next year's profit
- B) Write a poem about milk
- C) Design a simple stock count sheet
- D) Clone a rival cafe's full menu

3. A use case is "practical" when...

- A) It needs secret customer phone lists
- B) Only a huge company could try it in 3 years
- C) You can try it soon, with data you have, privately, with a human deciding

D) AI posts it with no one looking

ANSWERS

1) B 2) C 3) C — 1) A checklist is useful, easy, and private. | 2) It hits the real problem this week. | 3) Four yes: soon, data we have, private, human decides.

CHAPTER 5 • WEEK 3 LESSON 6

Find the problem. Compare. Choose. Explain.

Do not start with the shiny tool. Start with the headache.

1. Real problem

2. List 2–3 ideas

3. Useful / easy / value

4. Pick + why

Here is a full story, told slowly. Noor owns a small cafe near University City. From four o'clock to seven o'clock the place is full of students. Mobile orders arrive. Drinks go to the wrong table. Guests complain. Noor is tired and says, "Just use AI and make us famous on TikTok."

Stop. Fame is not the headache. The headache is mixed orders at peak time. If you skip this step, you will choose a shiny tool that does not fix the day. Lesson 6 is really a habit: name the real problem in one short sentence before you touch AI.

Then list two or three ideas. Score each idea with three words. Useful = does it touch THIS pain? Easy = can we do it soon with the people we have? Value = will guests or money improve in a way we can see? Pick one idea and say why the others lost.

Idea	Useful for THIS pain?	Easy?	Business value?
A. Funny reels all week	Low	Easy	Likes, not fewer wrong cups
B. Peak-hour checklist + call-back line	High	Easy	Fewer mix-ups this week
C. Camera that names every student	Maybe later	Hard + private	Too heavy now

HOW TO WRITE THE REASON

Choose B. It touches the real problem, staff can start tomorrow, and no student faces are collected. That sentence is what the examiner wants.

When you write the reason, use ordinary words. "I choose B because staff can start tomorrow and no student faces are collected." That is enough. You do not need fancy language.

3 easy questions — Lesson 6

Try first. Answers are in the green box under the three questions.

1. In Noor's cafe, what is the MAIN problem?

- A) The logo colour
- B) Mixed mobile orders at peak time
- C) Not enough TikTok dances
- D) The name of the dates

2. Which use case scores best for useful + easy + value right now?

- A) A camera that names every student
- B) Funny reels only
- C) A peak-hour checklist and call-back line
- D) Buying a robot chef

3. Why is "explain the reason" part of the lesson?

- A) Because long words get extra marks
- B) Because the teacher likes stories
- C) Because a choice without a reason is a guess
- D) Because AI must sign the paper

ANSWERS

1) B 2) C 3) C — 1) Start with the headache, not the owner's shiny idea. | 2) High usefulness, easy, clear value this week. | 3) You must say why B beats A and C.

CHAPTER 6 • WEEK 4 LESSON 7

Risks, limits, traffic lights

Name risks • how limits change decisions • low / medium / high • reduce risk

1 LOW
Easy to fix**2 MEDIUM**
Human must edit**3 HIGH**
AI must not decide

A risk is not "AI is evil." A risk is "this answer can hurt a guest, a staff member, or the business if I trust it too fast." The traffic lights help you slow down. Green means little harm if it is wrong. Amber means a person must edit. Red means a human must decide — money, people, health, personal data, or a public "we are the best" claim.

Common risks when you use AI output in business

Read these like short warning stories, not as a list to chant.

Risk	What it looks like
Wrong facts	A made-up Sharjah rule or a fake award
Out of date	An offer from last year written as if it is today
Bias	It assumes every guest is the same kind of person
Privacy leak	A class list or customer Excel in the chat
Over-trust	The manager copies the answer onto a poster with no check
Copying	The line is too close to another cafe's slogan
Tone miss	A joke that feels rude in a family UAE setting
No owner	"AI said so" — nobody is accountable

How limits change a real decision

Suppose you ask AI, "What should I charge for karak in Sharjah?" It may invent a number. It cannot see today's milk cost, today's queue, or the cafe across the road. If you print that number on the board, the limit has become your pricing mistake. The fix is simple: use AI to list questions to think about, then you set the price from real costs.

Light	Examples	What you do
Low	Brainstorm captions. Make a revision quiz.	Skim and use.
Medium	Draft a rota. Draft a guest reply. Summarise YOUR totals.	A person edits first.
High	Price. Hire or fire. Medical claim. Personal data. "Best in the city" advert.	AI does not decide.

Reduce risk before you use the output

You do not need a big committee. Six small moves are enough. Check every number. Take names and phones out. Ask one other person to read public text. Write DRAFT on the file until a manager says yes. Keep money and people decisions with a human. If you cannot explain the sentence, do not publish it.

3 easy questions — Lesson 7

Try first. Answers are in the green box under the three questions.

1. Brainstorming 8 caption ideas is usually...

A) High risk

- B) Low risk
- C) Illegal
- D) A finance decision

2. Pasting CVs into ChatGPT to decide who to fire is...

- A) Low risk
- B) Medium risk
- C) High risk — do not do this
- D) Fine if the English is good

3. Which action reduces risk?

- A) Auto-post every draft
- B) Leave customer names in the prompt
- C) Check facts and mark the file DRAFT until a person says yes
- D) Trust any number AI prints

ANSWERS

1) B 2) C 3) C — 1) Easy to check. Little harm if one idea is weak. | 2) People + personal data + a life decision. | 3) Human gate before the output goes live.

CHAPTER 7 • WEEK 4 LESSON 8

Responsible use + review

Study vs work • safe vs unsafe • checklist • Weeks 1–4

This last lesson ties the book together. Responsible use is not a new tool. It is the same habit in two places.

At school, AI is a tutor. You still open the slides. You still write. You can still explain the idea if a teacher asks. At work, AI is a junior assistant. A named person reads the draft and takes responsibility. In both places, hiding the help is how good use turns into not-good use.

Safe versus unsafe is usually obvious if you say the prompt out loud. "Explain matrix structure" is safe. "Here is the customer Excel, blast WhatsApp" is unsafe. If the sentence contains an ID, a password, a phone list, a fake review, or "hide that you helped," put the phone down.

SAFE

- Explain matrix structure in simple words
- Draft 5 captions. I pick and edit
- Totals with no names: which day was slow?
- List the risks of this idea

UNSAFE

- Write my whole assessment and hide it
- 20 fake Google reviews
- Customer Excel → WhatsApp blast
- Here is my password / Emirates ID

The famous weak prompt, repaired

"Give me the idea of the best cafe in Sharjah" fails for three calm reasons. It is vague, so the answer is wallpaper. It invites copying a real cafe. And the word "best" can slide into a false advert. The repaired prompt gives a place, a customer, a budget, a ban on copying, and a format. That is how a responsible prompt looks.

WEAK

- "Give me the idea of the best cafe in Sharjah."
- Vague
- Invites copying
- "Best" with no proof

RESPONSIBLE

- Study cafe near University City
- For HCT students, modest budget
- 6 original ideas, no named copies
- Each idea: 3 items, 1 risk, 1 honest caption

Responsible-use checklist – tick every time

	Question
	Purpose: coach or draft — not replace me?
	Prompt: role + task + place + rules + format?
	Data: no ID, phone, list, or password?
	Truth: can I check the facts?
	Honesty: would I tell my teacher or manager?
	Risk light: low, medium, or high?
	Next step: I edit. I do not paste-and-post.

ASSESSMENT 1 IN ONE LINE

They are not only testing if you can open ChatGPT. They are testing if you can tell good use from not-good use, write a clear prompt, judge the output, and stay responsible.

3 easy questions – Lesson 8

Try first. Answers are in the green box under the three questions.

1. "Here is our customer Excel with phone numbers. Write a WhatsApp blast." This is...

- A) Safe, because it is marketing
- B) Safe if you say please
- C) Unsafe — personal data + spam
- D) Required by the PDPL

2. Responsible AI at school means...

- A) AI writes the paper and you submit it
- B) AI coaches, and you can still explain the work
- C) You hide all AI use always
- D) You stop reading the slides

3. Which prompt is more responsible?

- A) "Give me the idea of the best cafe in Sharjah."
- B) "Copy Cafe X's menu 90%."
- C) "6 original study-cafe ideas near University City. No named copies. No fake awards."
- D) "Say we won a ministry prize."

ANSWERS

1) C 2) B 3) C — 1) Never paste a personal list into a public chatbot. | 2) You still own the learning. | 3) Clear place, original ideas, no false claim.

BACK PAGE

Pocket recap

Read this the night before Assessment 1

Lesson	Keep this sentence
L2	AI drafts. You check with 6 gates before you use it.
L3	AI is a tutor, not the student who submits the paper.
L4	Put the tool in the right department. Useful + clear + responsible.
L5	Each function has a practical AI job. Four yes = practical.
L6	Name the real problem. Score useful / easy / value. Explain why.
L7	Low / medium / high. High = people, money, data, public claims.
L8	Safe prompt. No sensitive data. Human still signs.

made by khalifa

Study kindly. Look at the pictures. Do the three questions. If you can teach the answer to a friend, you are ready.
